

### Files and what they do

|                       |                                                                         |
|-----------------------|-------------------------------------------------------------------------|
| humanoid.urdf.xacro   | declares the 18 joints + <ros2_control> block + Gazebo plugin tag       |
| controllers.yaml      | tells controller_manager which controller type each name maps to        |
| gazebo.launch.py      | starts gz sim, spawns robot, starts bridge, spawns controllers in order |
| package.xml           | declares gz_ros2_control, ros_gz_sim, ros_gz_bridge as dependencies     |
| robot_state_publisher | reads URDF + /joint_states → publishes TF so RViz can visualize sim     |
