

Timeline of one 10ms control tick

t=0ms	your code publishes /leg_controller/commands
t=1ms	leg_controller writes 10 values into ResourceManager slots
t=2ms	plugin.read() pulls current joint positions from Gazebo
t=3ms	jsb publishes /joint_states with all 18 positions
t=4ms	plugin.write() pushes commands into Gazebo joint targets
t=5-9ms	DART physics integrates 10 sub-steps, joints converge
t=9ms	RViz redraws using new TF, IMU publishes new sample
t=10ms	next tick begins, loop repeats forever

control loop = 100Hz • physics loop = 1kHz • IMU = 50Hz
